

CERTAIN CHRYSLER/FORCE TACHOMETERS 1983 THRU 1991 TACHOMETERS

When Force took over production of the Chrysler line of outboard engines, changes were already in process to a 20 pole Prestolite alternator (stator). This alternator change forced Veethree Marine to develop a tachometer solely for this series of outboards. When the engine was popular Veethree Marine had several series of tachometers that worked on these outboards. Today engines in that date range are not as popular or even existent anymore.

Veethree Marine has one tachometer that still works with these outboards.

Part #69044P Amega Series Tachometer

Only this tachometer will operate correctly on the 20 pole alternator. Below is a listing of the engine models and years affected:

Chrysler 55 and 60 hp 1968-1983

Force 85 and 125 hp all thru 1989
 90 and 120 hp all thru 1991
 150 hp all to 1991 Rev B engines
 L Drive 85 and 125 hp all thru 1989
 L Drive 90 and 120 hp all thru Rev B engines

Other Chrysler engine modules and years can use all of the other Veethree Marine tachometer series that are available. Force outboards beyond the models and years listed can use all of the other Veethree Marine tachometer series that are available.
