

TEMPERATURE SENDER SIZES

The industry designation for National Pipe Threads comes from the pipe's inside diameter (A). If you measure the outside diameter (B) of both the pipe or an actual sender with the same designation, it will be considerably larger than the NPT size.

NPT Designation	Inside Diameter (A)	Outside Diameter (B)	Outside Diameter (Fraction)
1/8-27	1/8 in.	0.40 in.	13/32 in.
1/4-18	1/4 in.	0.50 in.	35/64 in.
3/8-18	3/8 in.	0.675 in.	43/64 in.
1/2-14	1/2 in.	0.84 in.	27/32 in.
